### Inline Fuel Filter Update

**UNITS AFFECTED:**

New installations of the ICOM JTG II Liquid Propane System.

**PURPOSE:**

Upgrades to the internal tank filter eliminated the need for a filter on the fuel fill hose. The addition of the inline filter on the supply hose enhances the filtering of the LPG before entering the fuel rail. The stainless steel design provides improved serviceability and corrosion resistance in harsh environments in comparison to the original fuel fill filter.

**ACTION:**

Install the inline filter (see Fig. 1) onto the green chassis supply hose at a desired location. Reference the appropriate ICOM instruction P11X-9203 or P11X-9209 for assembly of the provided hose fittings onto the supply hose.
